

# Massachusetts Department of Environmental Protection Source Water Assessment and Protection (SWAP) Report for

### **Foxborough Water Department**

### What is SWAP?

The Source Water Assessment and Protection (SWAP) program, established under the federal Safe Drinking Water Act, requires every state to:

- inventory land uses within the recharge areas of all public water supply sources;
- assess the susceptibility of drinking water sources to contamination from these land uses; and
- publicize the results to provide support for improved protection.

# Susceptibility and Water Quality

Susceptibility is a measure of a water supply's potential to become contaminated due to land uses and activities within its recharge area.

A source's susceptibility to contamination does *not* imply poor water quality.

Water suppliers protect drinking water by monitoring for more than 100 chemicals, disinfecting, filtering, or treating water supplies, and using source protection measures to ensure that safe water is delivered to the tap.

Actual water quality is best reflected by the results of regular water tests. To learn more about your water quality, refer to your water supplier's annual Consumer Confidence Reports.

**Table 1: Public Water System Information** 

PWS Name	Foxborough Water Department		
PWS Address	40 South Street		
City/Town	Foxborough		
PWS ID Number	4099000		
Local Contact	Leo Potter		
Phone Number	(508) 543-1209		

### Introduction

We are all concerned about the quality of the water we drink. Drinking water wells may be threatened by many potential contaminant sources, including storm runoff, road salting, and improper disposal of hazardous materials. Citizens and local officials can work together to better protect these drinking water sources.

### Purpose of this report:

This report is a planning tool to support local and state efforts to improve water supply protection. By identifying land uses within water supply protection areas that may be potential sources of contamination, the assessment helps focus protection efforts on appropriate Best Management Practices (BMPs) and drinking water source protection measures.

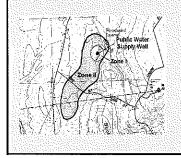

Refer to Table 3 for Recommendations to address potential sources of contamination. Department of Environmental Protection (DEP) staff are available to provide information about funding and other resources that may be available to your community.

### This report includes the following sections:

- 1. Description of the Water System
- 2. Land Uses within Protection Areas
- 3. Source Water Protection Conclusions and Recommendations
- 4. Appendices

# What is a Protection Area?

A well's water supply protection area is the land around the well where protection activities should be focused. Each well has a Zone I protective radius and a Zone II protection area.

### Glossary

Aquifer: An underground waterbearing layer of permeable material that will yield water in a usable quantity to a well.

Hydrogeologic Barrier: An underground layer of impermeable material (i.e. clay) that resists penetration by water.

Recharge Area: The surface area that contributes water to a well

Zone I: The area closest to a well; a 100 to 400 foot radius proporti onal to the well's pumping rate. This area should be owned or controlled by the water supplier and limited to water supply activities.

Zone II: The primary recharge area for the aquifer. This area is defined by hydrogeologic studies that must be approved by DEP. Refer to the attached map to determine the land within your Zone II.

### Section 1: Description of the Water System

Zone II #: 79

Susceptibility: Moderate

Well Names	Source IDs
Pumping Station #1	4099000-01G
Pumping Station #1	4099000-02G
Pumping Station #1	4099000-03G
Pumping Station #5	4099000-13G

Zone II #: 80

Susceptibility: High

Well Names	Source IDs
Pumping Station #3	4099000-07G
Pumping Station #3	4099000-08G
Pumping Station #3	4099000-09G
Pumping Station #3	4099000-10G

Zone II #: 366

Susceptibility: High

Well Names	Source IDs
Pumping Station #2	4099000-04G
Pumping Station #2	4099000-05G
Pumping Station #2	4099000-06G

Zone II #: 367

Susceptibility: High

Well Names	Source IDs
Pumping Station #2	4099000-12G

The Town of Foxborough is supplied by groundwater pumped from 11 gravel packed wells that are located in four separate Zone IIs (reference table above to correspond wells with Zone IIs). Each well has a Zone I of 400 feet. The wells are located in an aquifer with a high vulnerability to contamination due to the absence of hydrogeologic barriers (i.e. clay) that can prevent contaminant migration. Please refer to the attached map to view the boundaries of the Zone IIs.

All of Foxborough's water is treated with sodium hexametaphosphate for iron and manganese removal and as a corrosion inhibitor, potassium hydroxide to raise the water's pH making it less corrosive and sodium hypochlorite is added as a disinfectant. For current information on monitoring results and treatment, please contact the Public Water System contact person listed above in Table 1 for a copy of the most recent Consumer Confidence Report. Drinking water monitoring reporting data are also available on the web at http://www.epa.gov/safewater/ccr1.html.

### Section 2: Land Uses in the Protection Areas

The Zone IIs for Foxborough are dominated by a mixture of forest and residential land uses with small areas of commercial and light industrial land uses (refer to attached maps for details). Land uses and activities that are potential sources of contamination are listed in Table 2, with further detail provided in the Table of Regulated Facilities and Table of Underground Storage Tanks in Appendix A.

### Key Land Uses and Protection Issues include:

- 1. Zone I Protection
- Residential land uses
- 3. Transportation corridors
- 4. Hazardous materials storage and use
- 5. Oil or hazardous material contamination sites
- 6. Agricultural activities
- Comprehensive wellhead protection planning

The overall ranking of susceptibility to contamination for the system is high, based on the presence of at least one high threat land use within the water supply protection areas, as seen in Table 2.

1. Zone I Protection - The Zone I for each of the wells is a 400 foot radius around the wellhead. Massachusetts drinking water regulations (310 CMR 22.00 Drinking Water) requires public water suppliers to own the Zone I, or control the Zone I through a conservation restriction. The Zone Is for the wells are all owned or controlled by the public water system. Only water supply activities are allowed in the Zone I.

### Zone I Recommendations:

- Use BMPs for the storage, use, and disposal of hazardous materials such as water supply chemicals and maintenance chemicals.
- Do not use or store pesticides, fertilizers or road salt within the Zone I.
- Continue keep any new non water supply activities out of the Zone I.
- 2. Residential Land Uses Approximately 35% of the Zone IIs consist of

# of Source Protection

Benefits

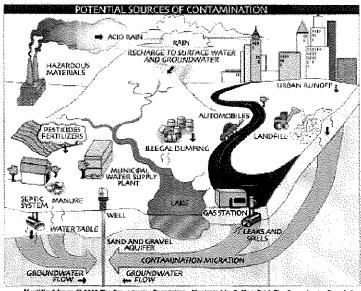

Source Protection helps protect public health and is also good for fiscal fitness:

- Protects drinking water quality at the source
- Reduces monitoring costs through the DEP Waiver Program
- Treatment can be reduced or avoided entirely, saving treatment
- Prevents costly contamination clean-up
- Preventing contamination saves costs on water purchases, and expensive new source development

Contact your regional DEP office for more information on Source Protection and the Waiver Program.

residential areas. None of the areas have public sewers, and so all use septic systems. If managed improperly, activities associated with residential areas can contribute to drinking water contamination. Common potential sources of contamination include:

- Septic Systems Improper disposal of household hazardous chemicals to septic systems is a potential source of contamination to the groundwater because septic systems lead to the ground. If septic systems fail or are not properly maintained they can be a potential source of microbial contamination.
- Household Hazardous Materials -Hazardous materials may include automotive wastes, paints, solvents, pesticides, fertilizers, and other substances. Improper use, storage, and

- disposal of chemical products used in homes are potential sources of contamination.
- Heating Oil Storage If managed improperly, Underground and Aboveground Storage Tanks (UST and AST) can be potential sources of contamination due to leaks or spills of the fuel oil they store.
- Stormwater Catch basins transport stormwater from roadways and adjacent properties to the ground. As flowing stormwater travels, it picks up debris and contaminants from streets and lawns. Common potential contaminants include lawn chemicals, pet waste, and contaminants from automotive leaks, maintenance, washing, or accidents.

### Residential Land Use Recommendations:

- ✓ Educate residents on best management practices (BMPs) for protecting water supplies. Distribute the fact sheet "Residents Protect Drinking Water" available in Appendix C and on www.mass.gov/dep/brp/dws/protect.htm, which provides BMPs for common residential issues.
- Work with planners to control new residential developments in the water supply protection areas.
- ✓ Promote BMPs for stormwater management and pollution controls.
- 3. Transportation Corridors Route 95 runs through the Zone II for Pumping Station #3 and Routes 1 and 140 run through the Zone II for Pumping Station #4. Local roads are common throughout all of the Zone IIs. Roadway construction, maintenance, and typical highway use can all be potential sources of contamination. Accidents can lead to spills of gasoline and other potentially dangerous transported chemicals. Roadways are frequent sites for illegal dumping of hazardous or other potentially harmful wastes. De-icing salt, automotive chemicals and other debris on roads are picked up by stormwater and wash in to catchbasins.

### Transportation Corridor Recommendations:

- ✓ Identify stormwater drains and the drainage system along transportation corridors. Wherever possible, ensure that drains discharge stormwater outside of the Zone Is.
- ✓ Work with the Town and State to have catch basins inspected, maintained, and cleaned on a regular schedule. Street sweeping reduces the amount of potential contaminants in runoff.
- Work with local emergency response teams to ensure that any spills within the Zone II can be effectively contained.
- ✓ If storm drainage maps are available, review the maps with emergency response teams. If maps aren't yet available, work with town officials to investigate mapping options such as the upcoming Phase II Stormwater Rule requiring some communities to complete stormwater mapping.
- 4. Hazardous Materials Storage and Use—The Zone IIs contain commercial or industrial land uses. Many small businesses and industries use hazardous materials, produce hazardous waste products, and/or store large quantities of hazardous materials in UST/AST. If hazardous materials are improperly stored, used, or disposed, they become

(Continued on page 7)

### What are "BMPs?"

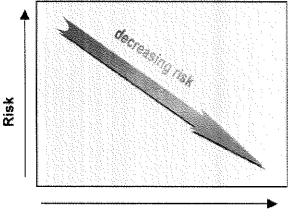

Best Management Practices (BMPs) are measures that are used to protect and improve surface water and groundwater quality. BMPs can be structural, such as oil & grease trap catch basins, nonstructural, such as hazardous waste collection days or managerial, such as employee training on proper disposal procedures.

### For More Information

Contact Tsabel Collins in DEP's Lakeville Office at (508) 849– 4030 for more information and assistance on improving current protection measures.

Copies of this report have been provided to the public water supplier, board of health, and the town

### Source Protection Decreases Risk

inadequate Source Protection Measures

Figure 2: Risk of contamination decreases as source protection increases. This is true for public water systems of any susceptibility ranking, whether High, Moderate, or Low.

superior

### Potential Source of Contamination vs. Actual Contamination

The activities listed in Table 2 are those that typically use, produce, or store contaminants of concern, which, if managed improperly, are potential sources of contamination (PSC).

It is important to understand that a release may never occur from the potential source of contamination provided facilities are using best management practices (BMPs). If BMPs are in place, the actual risk may be lower than the threat ranking identified in Table 2. Many potential sources of contamination are regulated at the federal, state and/or local levels, to further reduce the risk.

Table 2: Land Use in the Protection Areas (Zones I and II)

For more information, refer to Appendix A: Regulated Facilities within the Water Supply Protection Area

Activities	Quantity	Threat*	Zone II#	Potential Source of Contamination
Agricultural				
Fertilizer Storage or Use	1	М	80	Fertilizers: leaks, spills, improper handling, or overapplication (Sharon, berry farm and corn)
Landscaping	1	М	366	Fertilizers and pesticides: leaks, spills, improper handling, or over-application
Nurseries	2	М	366	Fertilizers, pesticides, and other chemicals: leaks, spills, improper handling, or over-application
Pesticide Storage or Use	1	Н	80	Pesticides: leaks, spills, improper handling, or over- application
Commercial				
Car/Truck/Bus Washes	1	L	367	Vehicle wash water, soaps, oils, greases, metals, and salts: improper management
Gas Stations	1	Н	80	Automotive fluids and fuels: spills, leaks, or improper handling or storage (Sharon)
Service Stations/ Auto Repair Shops	2	Н	367	Automotive fluids and solvents: spills, leaks, or improper handling
Dry Cleaners	1	Н	80	Solvents and wastes: spills, leaks, or improper handling (Sharon)
Furniture Stripping and Refinishing	1	Н	366	Hazardous chemicals: spills, leaks, or improper handling
Golf Courses	1	М	366	Fertilizers or pesticides: over-application or improper handling
Junk Yards and Salvage Yards	1	Н	80	Automotive chemicals, wastes, and batteries: spills, leaks, or improper handling
Medical Facilities	1	М	367	Biological, chemical, and radioactive wastes: spills, leaks, or improper handling or storage

### Table 2 Continued: Land Use in the Protection Areas (Zones I and II)

For more information, refer to Appendix A: Regulated Facilities within the Water Supply Protection Area

Activities	Quantity	Threat*	Zone II#	Potential Source of Contamination
Residential				
Fuel Oil Storage (at residences)	Numerous	M	All Zone IIs	Fuel oil: spills, leaks, or improper handling
Lawn Care / Gardening	Numerous	М	All Zone IIs	Pesticides: over-application or improper storage and disposal
Septic Systems / Cesspools	Numerous	М	All Zone IIs	Hazardous chemicals: microbial contaminants, and improper disposal
Miscellaneous				
Fishing/Boating	1	L	79	Fuel and other chemical spills, microbial contaminants
Oil or Hazardous Material Sites	4	***	79, 80, & 367	Tier Classified Oil or Hazardous Materials Sites are not ranked due to their site-specific character. Individual sites are identified in Appendix B.
Stormwater Drains/ Retention Basins	numerous	L	All	Debris, pet waste, and chemicals in stormwater from roads, parking lots, and lawns. (Stormwater runoff from stadium parking is a major concern within Zone II# 367)
Transmission Line Rights-of-Way - Type: Power Line	1	L	80	Corridor maintenance pesticides: over-application or improper handling; construction
Transportation Corridors	numerous	М	All	Fuels and other hazardous materials: accidental leaks or spills; pesticides: over-application or improper handling

### Notes:

- 1. When specific potential contaminants are not known, typical potential contaminants or activities for that type of land use are listed. Facilities within the watershed may not contain all of these potential contaminant sources, may contain other potential contaminant sources, or may use Best Management Practices to prevent contaminants from reaching drinking water supplies.
- 2. For more information on regulated facilities, refer to Appendix B: Regulated Facilities within the Water Supply Protection Area information about these potential sources of contamination.
- 3. For information about Oil or Hazardous Materials Sites in your protection areas, refer to Appendix C: Tier Classified Oil and/or Hazardous Material Sites.
- \* THREAT RANKING The rankings (high, moderate or low) represent the relative threat of each land use compared to other PSCs. The ranking of a particular PSC is based on a number of factors, including: the type and quantity of chemicals typically used or generated by the PSC; the characteristics of the contaminants (such as toxicity, environmental fate and transport); and the behavior and mobility of the pollutants in soils and groundwater.

potential sources of contamination. Hazardous materials should <u>never</u> be disposed of to a septic system or floor drain leading directly to the ground.

### Hazardous Materials Storage and Use Recommendations:

- ✓ Educate local businesses on best management practices for protecting water supplies. Distribute the fact sheet "Businesses Protect Drinking Water" available in Appendix C and on www.mass.gov/dep/brp/dws/protect.htm, which provides BMP's for common business issues.
- ✓ Work with local businesses to register those facilities that are unregistered generators of hazardous waste or waste oil. Partnerships between businesses, water suppliers, and communities enhance successful public drinking water protection practices.
- ✓ Educate local businesses on Massachusetts floordrain requirements. See brochure "Industrial Floor Drains" for more information.
- **5. Presence of Oil or Hazardous Material Contamination Sites** The Zone IIs contain DEP Tier Classified Oil and/or Hazardous Material Release Sites indicated on the map as Release Tracking Numbers 40000202, 40011387, 4 0011642 and 40014036. Refer to the attached map and Appendix B for more information.

### Oil or Hazardous Material Contamination Sites Recommendation:

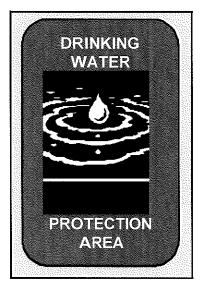

- Monitor progress on any ongoing remedial action conducted for the known oil or contamination sites.
- 6. Agricultural Activities A portion of the Zone II for Pump Station #3 within the Town of Sharon contains farming. Pesticides and fertilizers have the potential to contaminate a drinking water source if improperly stored, applied, or disposed. If not contained or applied properly, animal waste from barnyards, manure pits and field application are potential sources of contamination to ground and surface water.

### Agricultural Activities Recommendation:

Coordinate with the town of Sharon to work with farmers in your protection areas to make them aware of your water supply and to encourage the use of a US Natural Resources Conservation Service farm plan to protect water supplies.

# Top 5 Reasons to Develop a Local Wellhead Protection Plan

- Reduces Risk to Human Health
- Cost Effectivel Reduces or Eliminates Costs Associated With:
- Increased groundwater monitoring and treatment
- Water supply clean up and remediation
- Replacing a water supply
- Purchasing water
- Supports municipal bylaws, making them less likely to be challenged
- Ensures clean drinking water supplies for future generations
- Enhances real estate values clean drinking water is a local amenity. A community known for its great drinking water in a place people want to live and businesses want to locate.

7. Protection Planning – Currently, the Town does have water supply protection controls that meet DEP's Wellhead Protection regulations 310 CMR 22.21(2). A portion of the Zone II for Foxborough's Pumping Station #3 runs into Sharon. Sharon shares water withdrawls from this aquifer and Sharon also meets DEP's Wellhead Protection regulations 310 CMR 22.21(2).

In the Spring of 2000, Foxborough authorized the establishment of a Citizen's Advisory Committee (CAC) to investigate, evaluate and report on the existing environmental conditions and determine the present and future alternatives to address both water resource needs and wastewater collection options as part of a Comprehensive Wastewater Management Plan (CWMP). Currently the CAC is overseeing the Phase II of the CWMP.

In addition, Foxborough belongs to the Canoe River Aquifer Advisory Committee (CRAAC). CRACC is a regional committee that consists of the towns of Easton, Mansfield, Norton, Foxborough and Sharon. All five towns have been working together for the past 16 years to protect the Canoe River Aquifer. One of CRAAC's current goals is to develop consistent zoning bylaws and local regulations within the Canoe River watershed. Foxborough's regulations were chosen because the town has various zoning and non-zoning regulations besides its Water Resource Protection District by-law that protects its water supplies.

**Table 3: Current Protection and Recommendations** 

Protection Measures  Zone I	Status	Recommendations
Does the Public Water Supplier (PWS) own or control the entire Zone I?	YES	Follow Best Management Practices (BMP's) that focus on good housekeeping, spill prevention, and operational practices to reduce the use and release of hazardous materials.
Is the Zone I posted with "Public Drinking Water Supply" Signs?	NO	Economical signs are available from the Northeast Rural Water Association (802) 660-4988.
Is Zone I regularly inspected?	YES	Continue daily inspections of drinking water protection areas.
Are water supply-related activities the only activities within the Zone I?	YES	Continue monitoring non-water supply activities in Zone Is.
Municipal Controls (Zoning Bylaws, He	alth Regulat	ions, and General Bylaws)
Does the municipality have Wellhead Protection Controls that meet 310 CMR 22.21(2)?	YES	Keep bylaws and local regulations up to date, refer to www.state.ma.us/dep/brp/dws/ for model bylaws and health regulations, and current regulations.
Do neighboring communities protect the Zone II areas extending into their communities?	NO	Work with Sharon to include Zone IIs in their wellhead protection controls.
Planning		
Does the PWS have a Wellhead Protection Plan?	YES	Use Wellhead Protection Committee to implement objectives of your Wellhead Protection Plan.
Does the PWS have a formal "Emergency Response Plan" to deal with spills or other emergencies?	YES	Augment plan by developing a joint emergency response plan with fire department, Board of Health, DPW, and local and state emergency officials. Coordinate emergency response drills with local teams.
Does the municipality have a wellhead protection committee?	NO	Establish committee; include representatives from citizens groups, neighboring communities, and the business community.
Does the Board of Health conduct inspections of commercial and industrial activities?	YES	For more guidance see "Hazardous Materials Management: A Community's Guide" at www.state.ma.us/ dep/brp/dws/files/hazmat.doc
Does the PWS provide wellhead protection education?	YES	Aim additional efforts at commercial, industrial and municipal uses within the Zone II.

Protection planning protects drinking water by managing the land area that supplies water to a well. A Wellhead Protection Plan coordinates community efforts, identifies protection strategies, establishes a timeframe for implementation, and provides a forum for public participation. Foxborough has a Wellhead Protection Plan in place.

### Protection Planning Recommendations:

- ✓ Coordinate efforts with local officials to keep local wellhead protection controls current MA Wellhead Protection Regulations 310 CMR 22.21(2). For more information on DEP land use controls see http://mass.gov/dep/brp/dws/protect.htm.
- ✓ Use CWMP CAC to implement recommendations of Foxborough's Wellhead Protection Plan.
- ✓ Ensure that the local Board of Health prioritizes floordrain inspections within the Zone II areas of Foxborough.
- Work with town boards to review and provide recommendations on proposed development within your water supply protection areas. To obtain information on build-out analyses for the town, see the Executive Office of Environmental Affairs' community preservation web site, http://commpres.env.state.ma.us/.

Other land uses and activities of concern within the Zone IIs include auto service stations, a gas station, a dry cleaner and a junk yard. Refer to Table 2 and Appendix A for more information about these land uses.

Identifying potential sources of contamination is an important initial step in protecting your drinking water sources. Further local investigation will provide more in-depth information and may identify new land uses and activities that are potential sources of contamination. Once potential sources of contamination are identified, specific recommendations like those below should be used to better protect your water supply.

## Section 3: Source Water Protection Conclusions and Recommendations

### Current Land Uses and Source Protection:

As with many water supply protection areas, the system Zone IIs contain potential sources of contamination. However, source protection measures reduce the risk of actual contamination, as illustrated in Figure 2. The water supplier and town is commended for taking an active role in promoting source protection measures in the Water Supply Protection Areas through:

- Establishing a Citizens Advisory Committee to study Foxborough's water and wastewater current and future needs.
- Participating in the Canoe River Aquifer Advisory Committee (CRAAC) and for providing model local zoning and non-zoning regulations for other CRAAC member towns to emulate.
- Holding annual household hazardous waste day for the last 16 years and including informational materials on water supply protection to participants.
- Providing a weekly waste oil and paint collection center.
- Receiving a source protection award for its dedication in developing a Water Reuse Plan for the protection of drinking water supplies. In 1999, the approval of the Patriot Stadium and Economic Development Area presented the Town with the challenge of providing an additional 24 million gallons of water annually. To facilitate the development of the Water Reuse Plan (the first in Massachusetts), the Foxboro water department successfully established a cooperative agreement with the Patriots, conducted numerous public informational meetings, and fostered the necessary support and

### What is a Zone III?

A Zone III (the secondary recharge area) is the land beyond the Zone II from which surface and ground water drain to the Zone II and is often coincident with a watershed boundary.

The Zone III is defined as a secondary recharge area for one or both of the following reasons:

- The low permeability of underground water bearing materials in this area significantly reduces the rate of groundwater and potential contaminant flow into the Zone II.
- The groundwater in this area discharges to a surface water feature such as a river, rather than discharging directly into the aguifer.

The land uses within the Zone III are assessed only for sources that are shown to be groundwater under the direct influence of surface water.

### Additional Documents:

To help with source protection efforts, more information is available by request or online at mass.gov/dep/brp/dws including:

- 1. Water Supply Protection
  Guidance Materials such as
  model regulations, Best
  Management Practice
  information, and general water
  supply protection information.
- 2. MA DEP SWAP Strategy
- Land Use Pollution Potential Matrix
- 4. Draft Land/Associated Contaminants Matrix

- understanding for the plan's approval.
- Receiving a source protection award for developing a unique groundwater monitoring program for 13 wells based on a comprehensive database of potential contaminant sources and area hydrogeology.
- Their other notable programs include frequently requiring environmental impact statements for developments within their protection district and a substantial budget for evaluation of MEPA projects and 21E sites.

### Source Protection Recommendations:

To better protect the sources for the future:

- ✓ Continue the Zone I inspections regularly, and when feasible, remove any non-water supply activities.
- ✓ Educate residents on ways they can help you to protect drinking water sources.
- ✓ Work with emergency response teams to ensure that they are aware of the stormwater drainage in your Zone IIs and to cooperate on responding to spills or accidents.
- ✓ Partner with local businesses to ensure the proper storage, handling, and disposal of hazardous materials.
- ✓ Monitor progress on any ongoing remedial action conducted for the known oil or contamination sites.
- ✓ Work with farmers in your protection areas to make them aware of your water supply and to encourage the use of a NRCS farm plan to protect water supplies.

### Conclusions:

These recommendations are only part of your ongoing local drinking water source protection. Additional source protection recommendations are listed in Table 3, the Key Issues above and Appendix C.

DEP staff, informational documents, and resources are available to help you build on this SWAP report as you continue to improve drinking water protection in your community. The Department's Wellhead Protection Grant Program and Source Protection Grant Program provide funds to assist public water suppliers in addressing water supply source protection through local projects. Protection recommendations discussed in this document may be eligible for funding under the Grant Program. Please note: each spring DEP posts a new Request for Response for the grant program (RFR).

Other grants and loans are available through the Drinking Water State Revolving Loan Fund, the Clean Water State Revolving Fund, and other sources. For more information on grants and loans, visit the Bureau of Resource Protection's Municipal Services web site at: http://mass.gov/dep/brp/mf/mfpubs.htm.

The assessment and protection recommendations in this SWAP report are provided as a tool to encourage community discussion, support ongoing source protection efforts, and help set local drinking water protection priorities. Citizens and community officials should use this SWAP report to spur discussion of local drinking water protection measures. The water supplier should supplement this SWAP report with local information on potential sources of contamination and land uses. Local information should be maintained and updated periodically to reflect land use changes in the Zone II. Use this information to set priorities, target inspections, focus education efforts, and to develop a long-term drinking water source protection plan.

### Section 4: Appendices

- A. Regulated Facilities within the Water Supply Protection Area
- B. Table of Tier Classified Oil and/or Hazardous Material Sites within the Water Supply Protection Areas
- C. Additional Documents on Source Protection

Note: This appendix includes only those facilities within the water supply protection area(s) that meet state reporting requirements and report to the appropriate agencies. Additional facilities may be located within the water supply protection area(s) that should be considered in local drinking water source protection planning.

# APPENDIXB — Table of Tier Classified Oil and/or Hazardous Material Sites within the Water Supply Protection Areas

DEP's datalayer depicting oil and/or hazardous material (OHM) sites is a statewide point data set that contains the approximate location of known sources of contamination that have been both reported and classified under Chapter 21E of the Massachusetts General Laws. Location types presented in the layer include the approximate center of the site, the center of the building on the property where the release occurred, the source of contamination, or the location of an on-site monitoring well. Although this assessment identifies OHM sites near the source of your drinking water, the risks to the source posed by each site may be different. The kind of contaminant and the local geology may have an effect on whether the site poses an actual or potential threat to the source.

The DEP's Chapter 21E program relies on licensed site professionals (LSPs) to oversee cleanups at most sites, while the DEP's Bureau of Waste Site Cleanup (BWSC) program retains oversight at the most serious sites. This privatized program obliges potentially responsible parties and LSPs to comply with DEP regulations (the Massachusetts Contingency Plan – MCP), which require that sites within drinking water source protection areas be cleaned up to drinking water standards.

For more information about the state's OHM site cleanup process to which these sites are subject and how this complements the drinking water protection program, please visit the BWSC web page at <a href="http://www.state.ma.us/dep/bwsc">http://www.state.ma.us/dep/bwsc</a>. You may obtain site -specific information two ways: by using the BWSC Searchable Sites database at <a href="http://www.state.ma.us/dep/bwsc/sitelist.htm">http://www.state.ma.us/dep/bwsc/sitelist.htm</a>, or you may visit the DEP regional office and review the site file. These files contain more detailed information, including cleanup status, site history, contamination levels, maps, correspondence and investigation reports, however you must call the regional office in order to schedule an appointment to view the file.

The table below contains the list of Tier Classified oil and/or Hazardous Material Release Sites that are located within your drinking water source protection area.

**Table 1**: Bureau of Waste Site Cleanup Tier Classified Oil and/or Hazardous Material Release Sites (Chapter 21E Sites) - Listed by Release Tracking Number (RTN)

RTN	Release Site Address	Town	Contaminant Type
4-0011387	NEPONSET RESERVOIR	FOXBOROUGH	Hazardous Material
4-0014036	RTE 95 NORTH	FOXBOROUGH	Hazardous Material
4-0000202	170-186 OAK ST	FOXBOROUGH	Oil and Hazardous Material
4-0011642	RTE 140	FOXBOROUGH	Hazardous Material

For more location information, please see the attached map. The map lists the release sites by RTN.
